

Exabeam Resident Engineer Service

Cybersecurity expertise when and where you need it

The security risks to your IT systems are growing exponentially. Unfortunately, your team's expansion likely isn't keeping pace.

Finding skilled information security resources can feel like an impossible mission for many organizations. With such a unique skill set, these experts are in high demand. This situation leaves many organizations with understaffed security operations centers (SOCs), relying on their limited in-house security expertise to deploy, maintain, and leverage complex security stacks. The result? Organizations are vulnerable, dependent upon the few expert employees on their team to protect against an increasing number of attacks.

These risks lead many Chief Information Security Officers (CISOs) to explore different options to mitigate risks and manage the lack of resources within their SOC. Options such as outsourcing their SOC operations to a managed security service provider (MSSP) could seem optimal without adding additional staff.

While this option may offer flexibility, the cost and complexity of changing current contracts can make this shift a nightmare. Thankfully, the Exabeam Resident Engineer (RE) Service offers an alternative solution that provides help when and where you need it most — without the hassle.

With the Exabeam RE Service, you can leverage our deep cybersecurity expertise without adding permanent, hard-to-find resources to your team. Additionally, you can not only optimize the deployment of the Exabeam Security Operations Platform, but also ensure your in-house security team can deliver the consistent security outcomes your business demands. This service is the game changer your SOC needs to stay ahead of attackers and maximize the value of your security stack.

Exabeam Resident Engineer Service

When and where you need it

Exabeam consultants provide your security team with a full-time, dedicated, remote resource ready to support your team without having to learn an extensive process. As a result, our consultants are uniquely qualified to partner with your team to ensure your organization gets the most out of the Exabeam security solution of your choice.

What can you expect from Exabeam RE Service consultants?

- A focus on data onboarding and data integrity monitoring to ensure your Exabeam solution is running optimally
- Assistance in scaling pilot configurations to your production security platform
- Capturing your unique requirements and configuring the solution to meet those specifications
- Education through informal workshops, coaching sessions, design reviews, and documentation to expand your in-house technical expertise in troubleshooting product and interoperability issues with other security and network vendors used in your enterprise infrastructure
- Security analysis and threat-hunting expertise using Exabeam insights

The benefits

- Reduction in operational costs
- Built-in familiarity with use cases, configurations, and challenges
- Consistent and accurate knowledge of all assets and locations
- Quality data to ensure accurate, timely capture of issues
- Acceleration of deployments and new service adoption
- Improvement of readiness of employees, suppliers, and partners via up-to-date awareness of projects/status
- A strategic competitive advantage via proactive management of your constantly evolving business environment
