

Case Study

Allergan Proactively Protects Itself From Insider Threats with Exabeam

Industry

Pharmaceutical

Exabeam Products

User and Entity Behavior Analytics (UEBA)

The Challenge

Allergan is a multinational leader in the pharmaceutical industry with operations in over 100 countries. Over the last several years, Allergan has experienced more than 50 merger and acquisition transactions; amidst this ever-changing environment, it needed to protect itself from complex threats like malicious insiders and compromised accounts.

“One of the things we liked about Exabeam, frankly, was that it was by far the quickest to deploy of any of the technologies we looked at and we were able to see value in it and evidence that it was actually doing its analytics and giving us potential alerts within a few days,” Mike Towers, CISO at Allergan.

The three primary benefits and value propositions we see with Exabeam is number one: it's proactive, we have really good capability to respond to incidents after they happen and Exabeam allows us to look at things and potential indicators before they happen. Number two: it provides a mitigation to two of our most challenging risks—data exfiltration and insider theft, and number three: it does so without a lot of tweaking, a lot of consulting time—you plug it into the network and it works.

The Solution

Allergan implemented Exabeam's user and entity behavior analytics (UEBA) solution to proactively protect itself from insider threats by ingesting security data from its myriad of security solutions and holistically analyzing that data to baseline normal behavior for its operations. Once implemented, Exabeam was able to proactively detect any deviation from normal use or machine activity that might indicate a potential security event was emerging.

The Result

Through the use of Exabeam Advanced Analytics, Allergan was able to easily and proactively detect insider threats and compromised credentials before they developed into security breaches or loss of intellectual property. Exabeam's behavior-based approach to threat detection delivered value for Allergan out of the box, without the need for extensive customization or lengthy professional services engagements.

About Exabeam

Exabeam helps security teams outsmart the odds by adding intelligence to their existing security tools – including SIEMs, XDRs, cloud data lakes, and hundreds of other business and security products. Out-of-the-box use case coverage repeatedly delivers successful outcomes. Behavioral analytics allows security teams to detect compromised and malicious users that

were previously difficult, or impossible, to find. Automation helps overcome staff shortages by minimizing false positives and dramatically reducing the time it takes to detect, triage, investigate and respond. For more information, visit www.exabeam.com.
